

“How to Bring Your Chemical Invention to the World”

Abstract: Did you know that innovations at Queen's have generated millions of dollars for the university? Angela Lyon (Patent Agent) will provide an overview of the patent process that was key for Queen's-based research to have commercial success, and Jason Hendry (Commercialization Director) will tell us about how market-focused research improves its chance of commercial success. Both Angela and Jason will describe how their work at Queen's Partnerships and Innovation (QPI) can support researchers in Chemistry to leverage their work at Queen's to impact communities around the world. Angela and Jason will also be available after the seminar in the lounge to meet with people interested in discussing how QPI might support the commercialization of their work. QPI is sponsoring pizza for this event.
